## **Contents**

Introduction	1
Question 1	1

### Introduction

Here are the solutions to the past paper discussed in the revision session on 9th May 2023. This is designed as a guide to how much to write in the exam, and how you might want to style your solutions. To return to the homepage, click here.

### **Question 1**

#### Question.

Let  $f: \mathbb{R} \to \mathbb{R}$  be given by

$$f(x) = \frac{2x^2 - 2}{x^2 + x + 2}.$$

a) Using the  $\epsilon-\delta$  definition, prove that

$$\lim_{x \to 0} f(x) = -1.$$

b) Using the **Algebra of Limits** and the **Sequential Characterisation of Limits**, show that

$$\lim_{x \to +1} f(x) = 0.$$

**Solution.** a) Fix  $\epsilon>0$  and suppose  $0<|x-0|<\delta$  for some  $\delta>0$  to be chosen later. Then

$$|f(x) - (-1)| = \left| \frac{2x^2 - 2}{x^2 + x + 2} - (-1) \right|,$$

$$=\frac{|x||3x+1|}{|x^2+x+2|}.$$

Now,

$$|3x+1| \le 3|x|+1$$
 (by the triangle ineq.),

$$< 4$$
 (if  $\delta < 1$ ).
